Education

PMI-CPMAI

PMI

In progress, expected June 2026

PMP Certified

PMI

2024

Master in Internet of Things

Universitat Politècnica, Barcelona

2020 – 2022

Bachelor in IT

Universitat Politècnica, Barcelona

2014 – 2019

Expertise

Product/Project Management

Agile & Waterfall Methodologies

Product Vision & Strategy

Product Lifecycle Management

Business & Market Development

Data Governance & Compliance

AI Skills

Generative AI & LLMs: Prompt engineering, evaluation, RAG pipelines

Agentic Systems: LangChain, CrewAI, OpenAI SDK, MCP

Automation: n8n, Python scripting

Technical Skills

Data/Analytics: Power BI, ML modelling fundamentals

Cloud/IoT: cloud services, connectivity protocols

Python & Docker & Kubernetes

Cybersecurity certifications (IEC 62443)

Tools

GitLab & Github

Jira & Planisware & Trello

Microsoft Project & Visio

Profile

Global Product Specialist with 4+ years of experience delivering digital and IoT-enabled SaaS solutions across international markets. PMP certified, with a strong technical foundation in software development, data analytics, and cloud platforms.

Over the last years, I expanded my scope into AI product development, including LLM-based applications, Retrieval-Augmented Generation (RAG) systems, and AI agents. Proven ability to translate complex technical capabilities into scalable, market-driven products by bridging business, engineering, and data teams.

I am passionate about building intelligent products that drive automation, decision-making, and operational efficiency.

AI Projects (Applied / Independent)

Developed hands-on expertise in Artificial Intelligence and Generative AI product development, with a focus on practical implementation and real-world business applications. These are some example projects I have worked on:

- | | | |
|------------------------------------|---|--|
| RAG Knowledge Assistant | { | • Developed a RAG-based knowledge assistant using OpenAI API and Vector DB to enable secure retrieval and synthesis of internal documentation. |
| | | • Designed ingestion, chunking, embeddings, and retrieval logic to improve reliability for enterprise adoption and to support internal knowledge workflows. |
| Agentic AI MVP Workflow | { | • Built an agent-based AI workflow, using LangChain, to accelerate software MVP prototyping by automating requirement breakdown, task planning, and initial code generation. |
| | | • Used the framework to support stakeholder alignment and faster decision-making on solution feasibility. |
| LLM Evaluation & Quality Framework | { | • Designed an evaluation framework to assess LLM/RAG output quality using measurable criteria (accuracy, completeness, hallucination rate, and relevance). |
| | | • Built a testing dataset and scoring workflow to support model selection decisions and ensure reliability for enterprise use cases. |

Work Experience

Global Product Specialist – Digital Solutions

ABB, Quartino, Switzerland | October 2024 – January 2026

- Managed and evolved a portfolio of digital SaaS solutions focused on connectivity, monitoring, and data-driven services within a cross-functional global setup connecting more than 1000 assets.
- Drove global market development initiatives in 20+ countries across EMEA and the Americas, supporting product positioning, adoption strategy, and customer engagement.
- Identified and structured AI-enabled opportunities (predictive maintenance, anomaly detection, failure pattern recognition) to strengthen the value proposition of monitoring solutions.
- Contributed to internal GenAI enablement initiatives, including Copilot-driven documentation workflows to improve knowledge accessibility and operational efficiency.

Junior Digital Solutions Manager

 Ponera Group, Lugano, Switzerland | June 2023 – October 2024

- Led end-to-end development of 4 IoT-enabled SaaS products as Product Owner, coordinating external software providers and ensuring delivery against scope, timeline, and quality targets.
- Defined product requirements, functional specifications, and technical roadmaps, aligning business priorities with engineering execution.
- Managed vendor selection and RFP/RFQ processes for software and hardware partners, supporting commercial and technical decision-making.
- Applied data analytics and ML-based modelling on collected IoT data to support service optimization and data-driven decision processes.
- Worked with internal stakeholders to identify automation opportunities and integrate intelligent features into digital workflows.

Junior Project Manager – Data & Digital Projects

 Randstad, Leuven, Belgium | March 2022 – May 2023

- Coordinated cross-functional delivery teams across data analytics, ML, cloud, and embedded software projects for external clients.
- Managed project planning, backlog prioritization, stakeholder alignment, and delivery governance across multiple parallel initiatives.
- Supported the implementation of data-driven solutions aimed at improving operational efficiency and decision-making processes.
- Ensured project execution consistency through KPI tracking, risk management, and structured reporting.

Software Engineer

 ToBeIT, Barcelona, Spain | September 2020 – July 2021

- Developed automation solutions using Python and RPA technologies to streamline internal operational processes.
- Designed and implemented databases and data pipelines supporting internal applications and reporting needs.
- Collaborated with functional teams to translate business requirements into scalable software solutions.
